

Assignment:

List three domains from other disciplines that support the eminence of Development Communication as an Approach. Give a brief background of each domain. Explain how each domain support Development Communication.

1. SUSTAINABLE TOURISM

According to World Tourism Organization, it defines sustainable tourism as "tourism that takes full account of its current and future economic, social and environmental impacts, addressing the needs of visitors, the industry, the environment and host communities".

How does Sustainable Tourism support Development Communication?

Sustainable Tourism supports Development Communication by promoting the sustainable tourism practices. Sustainable tourism creates opportunities for sharing of information and ideas between people in communities and tourists. For example, by implementing programs in communities on how to host tourists responsibly, they can provide larger income opportunities. By interacting with tourists from different places, the local people in communities can learn about new culture, perspectives and ideas therefore, it will contribute in improving their communication skills. In addition, development communicator raises awareness about environmental issues and encourage eco-friendly practices among tourists and local people such as organizing clean-up drives, conserving water, and segregating their garbages.

2. INTRODUCTION TO ORGANIC AGRICULTURE

According to Food and Agriculture Organization of the United Nations (FAO), Organic agriculture is an integrated production management system that promotes and enhances agroecosystem health, including biodiversity, biological cycles and soil biological activity. It emphasizes the use of natural inputs (i.e. mineral and products derived from plants) and the renunciation of synthetic fertilizers and pesticides.

How does Introduction to Organic Agriculture support Development Communication?

Introduction to Organic Agriculture supports development communication. Organic agriculture enhances the food security and reduce hunger by promoting sustainable and organic farming practices. It creates economic opportunities for farmers through knowledge and skills that empower them in making informed decisions. It often produces a healthy and more nutritious food since it lessen the use of harmful chemicals like pesticides. In addition, it fosters trust and cooperation among farmers, consumers, and policymakers. Organic agriculture provides the foundation for effective development communication by understanding the practices of organic agriculture so that individuals in local communities can become more informed and engaged. This can be effectively communicated through various channels, including workshops, training programs, and media campaigns, to promote sustainable practices and empower people to make informed choices.

3. HEALTH EDUCATION

Health Education provides students with the knowledge and skills they need to maintain health and wellness throughout their lifetime. The intent of a comprehensive health education program is to motivate students to improve their health, prevent disease, and avoid or reduce health related risk behaviors. Health education provides real life learning experiences with personal applications of scientifically research-based health knowledge and skills in relevant situations. Health Education creates opportunities and experiences that engage and challenge young people to assess, explore, and question their health, while personalizing, adapting and evaluating their learning.

How does Health Education support Development Communication?

Health education empower people to make informed decisions about their health and encourages people to understand the possible health risks and advocate for their needs. It promotes healthy behaviours like regular exercise, balanced diets, healthy eating habits and avoiding harmful substances. In addition, health education is also essential for achieving sustainable development goals like reducing poverty, improving quality of life, addressing health concerns like mental health. To achieve this, health education needs effective communication, especially for advocating in community participation and engagement in health initiatives. By effectively communicating health information and promoting healthy lifestyles, health education

can contribute to improved health and a more sustainable future. Therefore, health education is relevant to effective communication strategies to engage in communities, advocate for health and well-being.
