

Enhancing CSO Accreditation and Performance Evaluation Process through Document Management: A Web-Based System for the Department of Agriculture in Region 6

Date: June 16, 2025

Name: Gilmour B. Almalbis Age:

Type of Respondent: ☐ CSO Chairperson ☐ CSO Representative ☒ Admin

Position: Information Systems Analyst I

☒ I hereby give my informed consent to participate as a system evaluator for this research study voluntarily. I understand that all information collected from me will be treated with strict confidentiality and will be used solely for academic and research purposes related to evaluating the developed system.

Gilmour B. Almalbis

Directions:

Please check the appropriate box for each question based on the scale provided.

Scale	Description
5	Excellent: This indicates the highest level of satisfaction, agreement, or positive sentiment. It suggests that the respondent is highly pleased or strongly agrees with the statement.
4	Very Satisfactory: This rating shows a strong level of satisfaction or agreement. It implies that the respondent is generally pleased or strongly agrees with the statement but may have some minor reservations.
3	Satisfactory: This rating indicates a neutral or moderate level of satisfaction or agreement. It suggests that the respondent is neither strongly positive nor negative about the statement.

- 2 Fair:** This rating suggests a level of dissatisfaction or disagreement. It implies that the respondent is somewhat displeased or disagrees with the statement but not strongly.
- 1 Poor:** This rating indicates the lowest level of satisfaction, agreement, or positive sentiment. It suggests that the respondent is highly dissatisfied or strongly disagrees with the statement.

	5 (Excellent)	4 (Very Satisfactory)	3 (Satisfactory)	2 (Fair)	1 (Poor)
Functionality					
1. Does the system provide the necessary functions to meet the user's needs and expectations?	✓				
2. Are the functions of the system accurate and complete?		✓			
3. Does the system respond to user input and process data on time?		✓			
4. Does the system consistently perform its intended functions without failures?		✓			
5. Are the system's functions relevant and aligned with the user's real-world tasks?		✓			
Usability					

6. Is the system easy to learn and use?	✓				
7. Is the user interface intuitive and straightforward?	✓				
8. Do the visual design and layout contribute to a positive and efficient user experience?		✓			
9. Are instructions, labels, and messages understandable and appropriately placed?		✓			
Performance Efficiency					
10. Does the system respond promptly during user interactions?		✓			
11. Are page loads and system processes completed within an acceptable time frame?		✓			
12. Are data processing tasks (e.g., saving, submitting, loading) performed efficiently?		✓			
13. Does the system operate without noticeable delays or performance issues?		✓			

Reliability					
14. Does the system operate without unexpected crashes or interruptions?		✓			
15. In case of errors or issues, does the system recover gracefully and allow users to continue tasks?		✓			
16. Does the system consistently deliver the expected outputs and behavior across different sessions?		✓			
Maintainability (For admin and IT Professionals only)					
17. Is the system easy to modify and adapt to changing requirements?			✓		
18. Is the system well-documented to facilitate maintenance and troubleshooting?		✓			
19. Is the system's source code well-structured, commented, and easy to understand?			✓

Additional Remarks:

Recommendation: The system should have utilized a PHP framework (e.g., Laravel, CodeIgniter) to enhance security, improve code organization, and support best practices in modern web development.
